

V_1 genotype frequencies

Conditional distribution of V_1 given $E_1 = e$

$$\text{ICI} \left(\begin{array}{l} \text{Individual has} \\ \text{variant genotypes} \\ g_1 \text{ for variant } V_1 \end{array} \right) = \log_2 \left(\frac{1}{\text{Frequency of } V_1 \text{ genotype } g_1 = 2} \right) (V_1 | E_1 = e) = \exp(-H(V_1 | E_1 = e))$$
